Montana Board of Oil and Gas Conservation Environmental Assessment

Operator: Slawson Exploration Company, Inc.

Well Name/Number: Arrowhead (Federal) 1-26H Location: SE SE Section 26 T21N R59E County: Richland, MT; Field (or Wildcat) Wildcat **Air Quality** (possible concerns) Long drilling time: No, 25-35 days drilling time. Unusually deep drilling (high horsepower rig): Triple derrick rig to drill a single lateral Horizontal Upper Bakken Shale well test, 14,479'MD/10,344'TVD. Possible H2S gas production: Slight chance H2S. In/near Class I air quality area: No Class I air quality area. Air quality permit for flaring/venting (if productive): Yes, DEQ air quality permit required under 75-2-211. Mitigation: _X Air quality permit (AQB review) __ Gas plants/pipelines available for sour gas __ Special equipment/procedures requirements __ Other: Comments: Single lateral, 14,479'MD/10,344'TVD, Upper Bakken Shale Formation horizontal well. **Water Quality** (possible concerns) Salt/oil based mud: Yes intermediate string casing hole will be drilled with oil based invert drilling fluids. Oil based invert drilling fluids for horizontal leg. Surface casing hole to be drilled with freshwater and freshwater mud. High water table: No high water table expected. Surface drainage leads to live water: No, closest drainage is an unnamed ephemeral tributary drainage to O'Brien Creek, about 300' off the southeast corner from this location. Within this ephemeral drainage is a stock pond, about 3/8 of a mile to the northeast from this location. Water well contamination: No, closest nearby wells are about ½ of a mile to the southwest and ¾ of a mile to the northwest from this location. Depth of these wells are 200' and 315' in depth. Surface hole will be drilled with freshwater and surface casing will be cemented to surface from 1652'. Porous/permeable soils: No, silty sand clay soils. Class I stream drainage: No, Class I stream drainages. Mitigation:

Soils/Vegetation/Land Use

Comments: 1652' surface casing to be set to protect freshwater zones and to cover the Fox Hills

(possible concerns)

___ Lined reserve pit
X Adequate surface casing

X Closed mud system

___ Berms/dykes, re-routed drainage

__ Off-site disposal of solids/liquids (in approved facility)

_X Other: _Lined cuttings pit will be dug for cuttings burial on well site.

aquifer. Adequate surface casing and operational BOP equipment should prevent any problems.

Steam crossings: None anticipated. High gradien potentials Yes, leasting will require moderate out, up to 18.4' and moderate fill, up to 14.2'
High erosion potential: Yes, location will require moderate cut, up to 18.4' and moderate fill, up to 14.2', required.
Loss of soil productivity: None, location to be restored after drilling well, if nonproductive. If productive
unused portion of drillsite will be reclaimed.
Unusually large wellsite: No, very large well site 450'X400'
Damage to improvements: Slight, surface use is grassland.
Conflict with existing land use/values: Slight
Mitigation
Avoid improvements (topographic tolerance)
Exception location requested
X Stockpile topsoil
Stream Crossing Permit (other agency review)
X Reclaim unused part of wellsite if productive
Special construction methods to enhance reclamation
Other
Comments: Access will be over existing county road, #354. An access road will be built into location
off the existing county road, 354, about 2,398' new road will be built into this location. Cuttings will be
buried in the lined cuttings pit. Oil based invert drilling fluids will be recycled. Completion fluids will be
hauled to a Class II disposal. Pit will be allowed to dry before being backfilled. No concerns.
Health Hazards/Noise
(possible concerns) Provincia to multiplicate from this provincia to the month cost from this
Proximity to public facilities/residences: <u>Closest residence is about 1.25miles to the northeast from this</u>
location.
Possibility of H2S: Slight chance H2S. Size of sig/length of drilling time Trials drilling sig 25 to 35 days drilling time
Size of rig/length of drilling time <u>Triple drilling rig 25 to 35 days drilling time.</u> Mitigation:
X Proper BOP equipment
Toper BOT equipment Topographic sound barriers
H2S contingency and/or evacuation plan
Special equipment/procedures requirements
Other:
Comments: Adequate surface casing cemented to surface with working BOP stack should
mitigate any problems. Distance sufficient to mitigate noise problems.
Wildlife/recreation
(possible concerns)
Proximity to sensitive wildlife areas (DFWP identified): None identified.
Proximity to recreation sites: None identified.
Creation of new access to wildlife habitat: No
Conflict with game range/refuge management: No
Threatened or endangered Species <u>Threatened or endangered species listed in Richland county by USFW</u>
service are Pallid Sturgeon, Piping Plover, Interior Lease Tern and Whooping Crane. Candidate species
are the Greater Sage Grouse and the Sprague's Pipit. NH tracker website lists the following as "Species of
Concern": eight (8) are listed as follows: Hoary Bat, Meadow Jumping Mouse, Grasshopper Sparrow,
Great Blue Heron, Veery, Whooping Crane, Loggerheaded Shrike and Spiny Softshell.
Mitigation:
Avoidance (topographic tolerance/exception)
X Other agency review (DFWP, federal agencies, DSL) Screening/fencing of pits, drillsite
acreeming/rending of bits offlishe
Other: Comments: _Surface grasslands are State of Montana "Trust Lands". There maybe species of

concern that maybe impacted by this wellsite. We ask the operator to consult with the surface owner as to what he would like done, if a species of concern are discovered at this location.

Historical/Cultural/Paleontological
(possible concerns)
Proximity to known sites None identified.
Mitigation
avoidance (topographic tolerance, location exception)
_X other agency review (SHPO, DSL, federal agencies)
Other: Comments: Surface grasslands are State of Montana "Trust Lands". There maybe possible
historical/cultural/paleontological sites that maybe impacted by this wellsite. We ask the operator to
consult with the surface owner as to his desires to preserve these sites or not, if they are found during
construction of the wellsite.
Social/Economic
(possible concerns)
Substantial effect on tax base
Create demand for new governmental services
Population increase or relocation
Comments: No concerns
Remarks or Special Concerns for this site
A single lateral Upper Bakken Shale horizontal well, 14,479'MD/10,344'TVD.
Comment Ford of the second of
Summary: Evaluation of Impacts and Cumulative effects
No long term impacts expected. Some short term impacts will occur.
I conclude that the approval of the subject Notice of Intent to Drill (does/does not) constitute a major
action of state government significantly affecting the quality of the human environment, and (does/does
<u>not</u>) require the preparation of an environmental impact statement.
